

Space Planning Recommendations

- Tables & Benches

Effective space planning is essential to creating inviting and functional outdoor environments. Drawing on our extensive experience, we've compiled these space planning recommendations to help guide your placement of Maglin tables and benches.

Please consult local codes and regulations to ensure compliance and best outcomes for your project.

Recommendations for table and benches spacing scenarios.

- Allow at least 18" from the bench back or rear edge of the bench seat to the edge of the table.
- Some bench models will require extra space for ease of access. 5" [127mm] between the legs of the bench and the legs of the table is recommended.
- Allow at least 24" (36" for wheelchair access) between benches for adequate walkways.
