

MAGLIN®

## COMPANY

### Outside. Inspired.

Maglin creates outdoor furniture for public spaces shaped by purpose, context, and human experience. From seating and shade to planters and site elements, our collections are designed to work together, supporting environments that invite comfort and long-term use. With a focus on thoughtful customization and enduring performance, we help designers and planners shape outdoor spaces that feel intentional, welcoming, and built to last.

# PIXEL

## The building blocks of great design.

Pixel's building blocks and rounds offer modular freedom with expansive design possibilities. Built from simple geometric forms, the collection supports a range of social experiences—from informal gathering to moments of pause within shared environments. Functioning as a flexible design toolkit, Pixel combines seating with integrated planting and shade to create cohesive layouts that can scale up or out, supporting layered and tiered seating configurations. Durable materials, thoughtful detailing, and straightforward installation ensure long-term performance without compromising design intent.

[www.maglin.com/collections/pixel](http://www.maglin.com/collections/pixel)

# O G D E N

A modular system for everyday gathering.

Defined by curves, transitions, and architectural precision, Ogden offers a modular approach to outdoor seating. The collection enables designers to shape backed or backless benches in curved, circular, and straight configurations that respond directly to site conditions. Inspired by an early custom curved bench project, Ogden has evolved into a highly adaptable system that includes modular and integrated table options for all landscapes. A broad range of radii, materials, and mounting options allows seating to integrate seamlessly while maintaining a cohesive visual language.

[www.maglin.com/collections/ogden](http://www.maglin.com/collections/ogden)

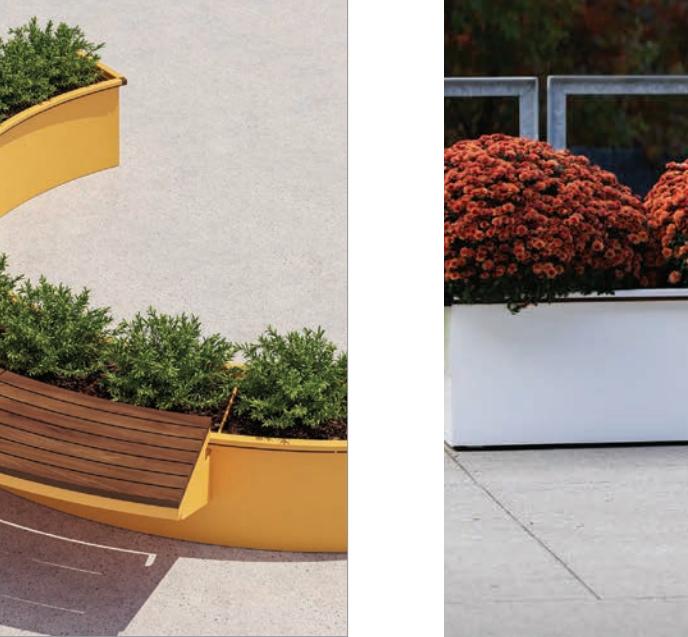

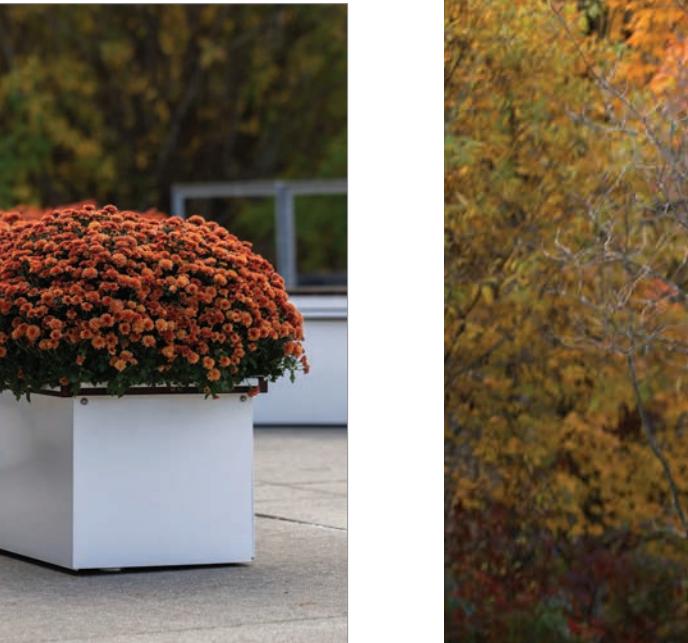

# C A N O E

Bloom with Possibility.

Built as a modular system for shaping planted space, CANOE allows designers to create continuous planter layouts without the limitations of custom fabrication. Versatile sections connect to form clean lines, sweeping curves, and precise angular transitions, supporting expressive landscape compositions across streetscapes, courtyards, roof decks, and parks. Designed to integrate planting and optional seating, CANOE functions as both an organizing element and a spatial framework. Drawing on the intuitive logic of Maglin's modular collections, the system offers flexibility, efficiency, and a cohesive design language.

[www.maglin.com/collections/canoe](http://www.maglin.com/collections/canoe)

# F L E X X

Defined spaces. Open possibilities.

FLEXX provides an architectural approach for defining space in the public realm. The collection of stylized steel panels allows designers to segment public areas without closing them off, creating zones that balance privacy, visibility, and flow. Whether used to form an outdoor room, frame planting, or highlight a focal point, FLEXX functions as a flexible design tool rather than a fixed boundary. Multiple panel patterns and sizes can be combined to create layered compositions that respond to site, scale, and intent.

[www.maglin.com/collections/flexx](http://www.maglin.com/collections/flexx)

## MINIS

### Design-Centric. Kid-Approved.

Created for environments where learning, play, and imagination intersect, Maglin Minis brings thoughtfully scaled outdoor furniture to children's spaces. Designed specifically for young users, the collection translates the durability, comfort, and design integrity of Maglin's full-sized products into forms that support independence and inclusion. With bright finishes, familiar silhouettes, and flexible configurations, Maglin Minis encourages collaboration, creativity, and active engagement. Built to withstand energetic use, the collection helps shape welcoming outdoor environments without compromising performance or design quality.
