

high density polyethylene

Maglin recycled plastic products use superior quality High Density Polyethylene (HDPE) with UV inhibitors.

Lumber – Wood Grain Appearance

Maglin uses plastic lumber from recycled High Density Polyethylene, creating a durable environmentally friendly alternative to traditional lumber.

Recycled plastic lumber does not incorporate any fillers such as wood fiber or wood flour which can absorb moisture and cause material degradation and color fading. The recycled plastics utilized in our plastic lumber are a combination of post-industrial, post-consumer regrind and wide-spec (industrial by-product) which would normally be disposed of in our landfills. It is perfect for most outdoor applications and utilized by industry, park and recreation, government and agriculture.

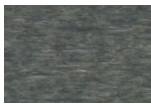

Features & Benefits:

- Long lasting and virtually maintenance free – except for periodic cleaning
- Never needs to be treated/painted
- Does not splinter or absorb moisture
- Does not leach or bleed toxins or carcinogens into the soil or marine environment
- Resistant to corrosive substances, oil and fuels, insects, fungi, salt spray, most graffiti and other environmental stresses

Panels – Orange Peel Appearance

The recycled plastic panel material is comprised of a UV resistant pigment that is solid throughout the sheet allowing for less noticeable nicks or scratches, full color cut ends, and maintenance free use.

Panel plastic can be used in an array of applications where high durability and no maintenance are desired in both wet and dry applications.

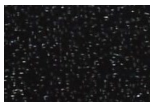

Features & Benefits:

- Vibrant Colors
- No Maintenance – except for periodic cleaning
- UV Stabilizing Additives
- BPA Free
- Durable and Versatile
- No VOC Off Gassing
